

Ibrahim Khaled Ibrahim Nassar
Back-End / Full-Stack Web Developer

Contact Info:

- **Address:** Alexandria– Egypt.
- **Email:** ebrahim24111990@gmail.com
- **LinkedIn:** <https://www.linkedin.com/in/ibrahim-nassar-5325ab236>

Profile:

Self-driven Web Developer with a Full Stack Nanodegree from Udacity, passionate about mastering software fundamentals. Proficient in both front-end (React, Angular) and back-end (Node.js, .NET Core) development. Solid foundation in database management (SQL & NoSQL) and cloud technologies like Docker and Google Cloud Platform. Experienced in developing scalable solutions, including real-time applications and AI-integrated tools.

Certification:

- Advanced Full-Stack Web Development Nano degree from Udacity (2023)
- Professional Front-End Web Development from Udacity (2022)
- Foundational C# from Microsoft
- Google Cloud Platform Professional Developer.

Education:

- Egypt FWD scholarship graduate track Full-stack Web Development.

Experience:

- **IT & Web developer** at a private school (April 2023, present)
- **Backend .Net developer @OPNsify** (Oct 2025, present)
- **worked on:**
- **PowerOps:** A cross-platform .NET network monitoring and automation system featuring a custom TCP protocol, Clean Architecture, and multi-hypervisor (ESXi) integration to automate enterprise infrastructure management.
 - ERP system (.Net & Angular)

Developed a scalable ERP system using **.NET (C#), Entity Framework, and Angular**, following **Domain-Driven Design** and **Clean Architecture**. Implemented RESTful APIs, role-based access control, user and permission management, inventory and transaction modules, and applied **Repository** and **Unit of Work** patterns. Focused on clean code, transactional consistency, and maintainable, modular system design.

- **Messaging App (Nest.js)**

Engineered a real-time event pipeline utilizing WebSockets (Socket.io) for client connectivity, Redis Pub/Sub for message fan-out, and RabbitMQ for reliable offline push notifications, Optimized data persistence strategies, employing PostgreSQL for relational user data and MongoDB for high-volume chat history storage.

- **Connect4 Multiplayer Game**

Developed a real-time multiplayer Connect4 game with an ASP.NET Core Web API backend and Angular frontend. Implemented SignalR for live game updates, Identity Framework for secure authentication, and NgRx for state management. Integrated Angular Material for a responsive UI and used Microsoft SQL Server for data persistence.

- **OCR app**

with this app you can convert your scanned pdf files into word documents and can create a sound record for it with the help of AI tools such as Google vision AI and Google TTS.

- **Library System**

A web-based application built using the .NET Framework, designed to manage book inventories, user accounts, and borrowing transactions. The system features CRUD operations, role-based access control, and an intuitive user interface to streamline library operations

- **Instagram clone**

A responsive front-end clone of Instagram's user interface built with React, replicating the design and core features of the platform, such as user posts, likes, and comments. The project focuses on mimicking Instagram's modern UI and interactive elements.

Technical Skills:

- Front-end: HTML5, CSS3, JavaScript, TypeScript, React, Angular
- Back-end: Node.js, Nest.js, Express, .Net, ASP.Net core, Firebase.
- Data bases: MongoDB, MSSQL, FireStore, PostgreSQL.
- AI Tools: Gemini, ChatGPT, Claude, Anti gravity , Copilot, Prompt Engineering,
- Other: Git & GitHub, Docker, Linux, Networking, Google Cloud Platform.
- Problem solving on hacker rank & code wars.
- English: B2 level

Soft Skills:

- Leadership, communication skills, Cross-functional teamwork, fast learner.

Courses and Self-Study:

- Fundamentals of Red Hat Enterprise Linux
- CCNA jeremy's lab
